Installations guide for payex prestashop modules

Contents
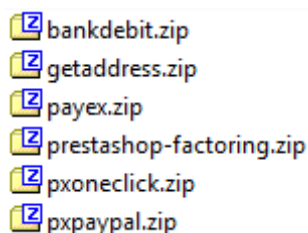

Prerequisite

Php extension:

- Soap

Installation

The modules work on prestashop version 1.5.6.2 and the standard checkout for prestashop.

First you need to unzip the modules from the original zip file to your computer.

Now you should have the modules in their own zip file like this:

- bankdebit.zip
- getaddress.zip
- payex.zip
- prestashop-factoring.zip
- pxoneclick.zip
- pxpaypal.zip

Step 1:

First you need to know how to sign in as admin on your prestashop site.

 Log on to your site using FTP/SFTP and go to the root folder where prestashop is located(this is usually public_html). Look for a folder called admin(plus something more). Ex admin2545
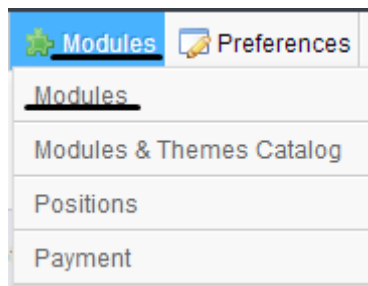

Step 2:

Now go to your web browser and enter http://yoursite.com/admin2545 as in this example and sign in as administrator.

Step 3:

Find the menu bar item called "Modules" and click the first link in the drop down menu also called "Modules"

Step 4:

Click the top right button "Add a new module"

Step 5:

Choose the module you want to upload to your site(must be a zip file or a tarball) and click upload

Step 6:

Find the module in the list below(it usually scrolls down to your module when you have uploaded it) and click install

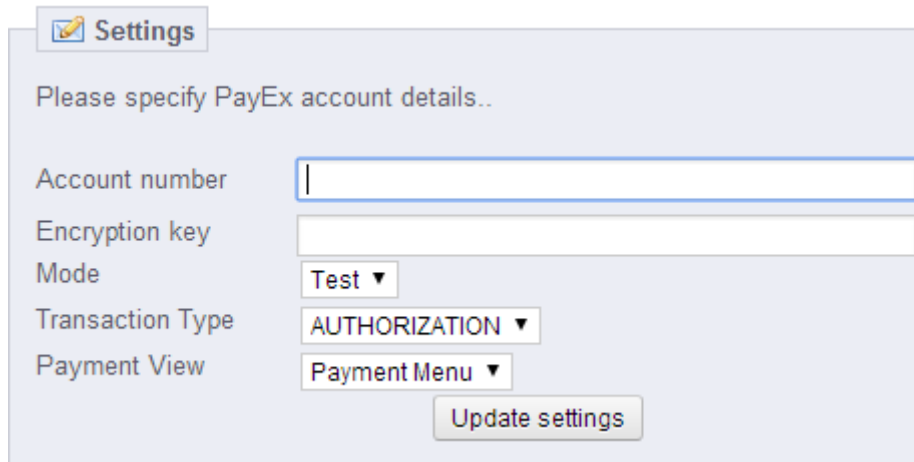

Installation complete

Updating modules

When you have updated a module it is important that you go in to that module and click the "update settings" button. Otherwise the new settings will not take place.

Configuration

Payex General

How to generate an encryption key

The encryption key for testing and production mode are different, so make sure you generate the one you need.
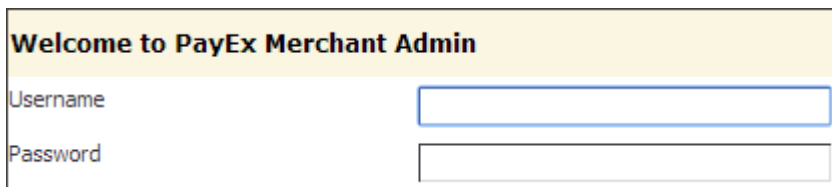

Step 1:

you must go to http://www.payexpim.com/ and choose admin for either test or production environment.

PAYEX ADMIN (Prod) https://secure.payex.com/Admin/ — PayEx transaction administration in production environment.
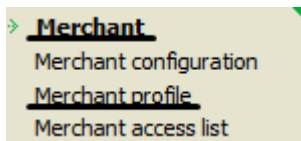

PAYEX ADMIN (Test) http://test-secure.payex.com/Admin/ — PayEx transaction administration in test environment.

Step 2:
Sign in with the information you have been given by payex

Step 3: In the margin on the left, find "Merchant" and click on "Merchant profile"

Step 4:

Click on "new encryption key"

Complete

How to activate Transaction Callback

Transaction callback is an extra process used by PayEx to verify that the webshop is informed of the result of the payment processing. It is useful if your server goes down during payment or if customer close the webbrowser or lose connection just after payment. Callback is a required functionality.

Use the following URL

http://www.shopsite.com/index.php?fc=module&module=payex&controller=transaction

Change www.shopsite.com for your shop's url

How to translate the modules

Sign in to your shop as admin and click the Localization menu and translation in the bottom of the drop down menu.

In the first menu on screen "Modify translations" select "Installed modules translations" in the drop down menu and then click the flag of the country you want to translate to.

If your language is not there then underneath there is a section where you can add a language or import a language pack.

Now you just have to open the correct fieldset and start translating. To easily find the correct module click expand all fieldsets and ctr+f and search for the module you want to translate.

The modules are called:

Factoring

Payex

Bankdebit

Pxoneclick

pxpaypal
